ODEF: DADO UM VETOR WEV. ONDE V E UM ESPAGO VETORIAL, J.X1,..., Xn; W= X1V1+...+XnVn ONDE VKE BASE DE V. O VETOR $X = [X_1, ..., X_n] \in DITO COMO AS COORDEMADAS$ DE V NA BASE DE V.

NOTAÇÃO: X=[W]

oPropriedade: [an+v]n = a[n]n+[v]n

$$\begin{aligned}
u &= \sum_{k=1}^{n} X_{k} \mathcal{U}_{k} \rightarrow [\mathcal{U}]_{u} = X \\
V &= \sum_{j=1}^{n} Y_{j} \mathcal{U}_{j} \rightarrow [\mathcal{V}]_{u} = Y \\
&= \sum_{j=1}^{n} Y_{j} \mathcal{U}_{j} \rightarrow [\mathcal{V}]_{u} = Y \\
&= \sum_{j=1}^{n} (\alpha X_{1} + Y_{1}) \mathcal{U}_{1} + \dots + (\alpha X_{n} + Y_{n}) \mathcal{U}_{n} \\
&= \sum_{j=1}^{n} (\alpha X_{1} + Y_{1}) \mathcal{U}_{1} + \dots + (\alpha X_{n} + Y_{n}) \mathcal{U}_{n}
\end{aligned}$$

0 SE T(M) E TRANSFORMAÇÃO T:U→U, ENTÃO:

$$[T]_{\mathcal{M}} = A = \left[\left[T(\mathcal{M}_1) \right]_{\mathcal{M}} \dots \left[T(\mathcal{M}_n)_{\mathcal{M}} \right] \right]$$

· PODEMOS GENERALIZAR PARA T:U→U

 $\circ [T(u)]_{M} = [T]_{M}[u]_{M}$

DEM:
$$T(u) = T(\overset{\circ}{\Sigma}x_{j}u_{j}) = \overset{\circ}{\Sigma}x_{j}T(u_{j}) \Rightarrow [T(u)]_{u} = \overset{\circ}{\Sigma}x_{j}[T(u_{j})]_{u}$$

$$[T]_{u}[u]_{u}$$
